# 学术报告

**报告题目：** Barley yellow dwarf disease in cereal crops

**报告人：** 周美学 教授

**报告时间：** 2019年5月16日(周四)

**10:00-11:30am**

**报告地点：** 农生环大楼A435会议室

## 报告人简介：

Prof Meixue Zhou has been involved in plant research for more than 30 years which includes more than 10 years of experience in China. As the head of Grains Research in Tasmanian Institute of Agriculture of the University of Tasmania, he has built a strong cereal research team with an international reputation, targeting biotic and abiotic stress tolerances in cereals. He has shown an international and national standing and reputation in plant abiotic stress tolerance research. He is leading a barley waterlogging/salinity tolerance group which is the world leading group in physiological studies and molecular mapping.

In the last 10 years, he has secured more than \$10 M of Category 1 competitive research funding, published over 150 refereed papers and 10 book chapters. Based on Google scholar, his h-index is 42 with >6000 citations. He has registered two new barley varieties with one receiving the Tasmania Innovation Award by Regional Development Australia in 2015. He is reviewing proposals for Australian Research Council (ARC) Discovery Projects, Future Fellowships, Industrial Transformation Research Hubs and Linkage Projects and various projects for the Natural Science Foundation of China. He is the chief editor of one peer-reviewed journal and editor of four peer-reviewed journals.
